

DR-09-LA

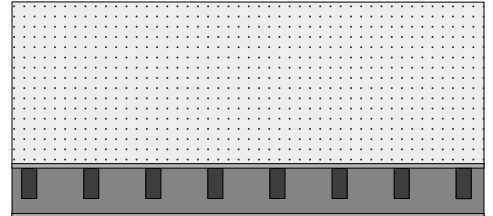

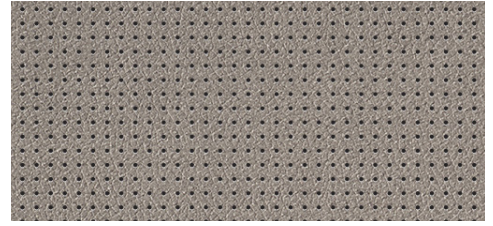

_Medium Sound Absorption Surface

DR-09-LA is a panel of fireproof MDF micro pierced on visible face that ensures the improvement of the acoustic comfort, thanks to the ability to absorb and dissipate the sound waves.

The visible part, is coated with laminate varnished with UV cycle to ensure greater scratch resistance and excellent aesthetic impact. The reverse is covered with black TNT which dissipates the sound wave.

DR-09-LA has a thickness of 16mm and square standard size 600x600mm, and panels of 1000x2500mm, the diameter of the micropierced hole is 0,3mm or 0,5mm.

Custom measurements available.
